## High Speed AUTOSTORE™ NOVRAM

### FEATURES

- **Fast Access Time:** 35ns, 45ns, 55ns
- **High Reliability**
  - Endurance: 1,000,000 Nonvolatile Store Operations
  - Retention: 100 Years Minimum
- **AUTOSTORE™ NOVRAM**
  - Automatically Stores RAM Data Into the E<sup>2</sup>PROM Array When V<sub>CC</sub> Low Threshold is Detected
  - User Enabled Option
  - Open Drain AUTOSTORE Status Output Pin
- **Power-on Recall**
  - E<sup>2</sup>PROM Data Automatically Recalled Into RAM Upon Power-up
- **Software Data Protection**
  - Locks Out Inadvertent Store Operations
- **Low Power CMOS**
  - Standby: 250µA
- **Infinite E<sup>2</sup>PROM Array Recall, and RAM Read and Write Cycles**

### DESCRIPTION

The Xicor X20C16 is a 2K x 8 NOVRAM featuring a high-speed static RAM overlaid bit-for-bit with a nonvolatile electrically erasable PROM (E<sup>2</sup>PROM) and the AUTOSTORE feature which automatically saves the RAM contents to E<sup>2</sup>PROM at power-down. The X20C16 is fabricated with advanced CMOS floating gate technology to achieve high speed with low power and wide power-supply margin. The X20C16 features a compatible JEDEC approved pinout for byte-wide memories, for industry standard RAMs, ROMs, EPROMs, and E<sup>2</sup>PROMs.

The NOVRAM design allows data to be easily transferred from RAM to E<sup>2</sup>PROM (store) and E<sup>2</sup>PROM to RAM (recall). The store operation is completed in 5ms or less and the recall operation is completed in 10µs or less. An automatic array recall operation reloads the contents of the E<sup>2</sup>PROM into RAM upon power-up.

Xicor NOVRAMS are designed for unlimited write operations to RAM, either from the host or recalls from E<sup>2</sup>PROM, and a minimum 1,000,000 store operations to the E<sup>2</sup>PROM. Data retention is specified to be greater than 100 years.

### PIN CONFIGURATION

AUTOSTORE™ NOVRAM is a trademark of Xicor, Inc.

# X20C16

## PIN DESCRIPTIONS

### Addresses ( $A_0$ – $A_{10}$ )

The Address inputs select an 8-bit memory location during a read or write operation.

### Chip Enable ( $\overline{CE}$ )

The Chip Enable input must be LOW to enable all read/write operations. When  $\overline{CE}$  is HIGH, power consumption is reduced.

### Output Enable ( $\overline{OE}$ )

The Output Enable input controls the data output buffers and is used to initiate read and recall operations. Output Enable LOW disables a store operation regardless of the state of  $\overline{CE}$ ,  $\overline{WE}$ , or  $\overline{NE}$ .

### Data In/Data Out ( $I/O_0$ – $I/O_7$ )

Data is written to or read from the X20C16 through the I/O pins. The I/O pins are placed in the high impedance state when either  $\overline{CE}$  or  $\overline{OE}$  is HIGH or when  $\overline{NE}$  is LOW.

### Write Enable ( $\overline{WE}$ )

The Write Enable input controls the writing of data to the static RAM.

### Nonvolatile Enable ( $\overline{NE}$ )

The Nonvolatile Enable input controls the recall function to the E<sup>2</sup>PROM array.

### AUTOSTORE Output ( $\overline{AS}$ )

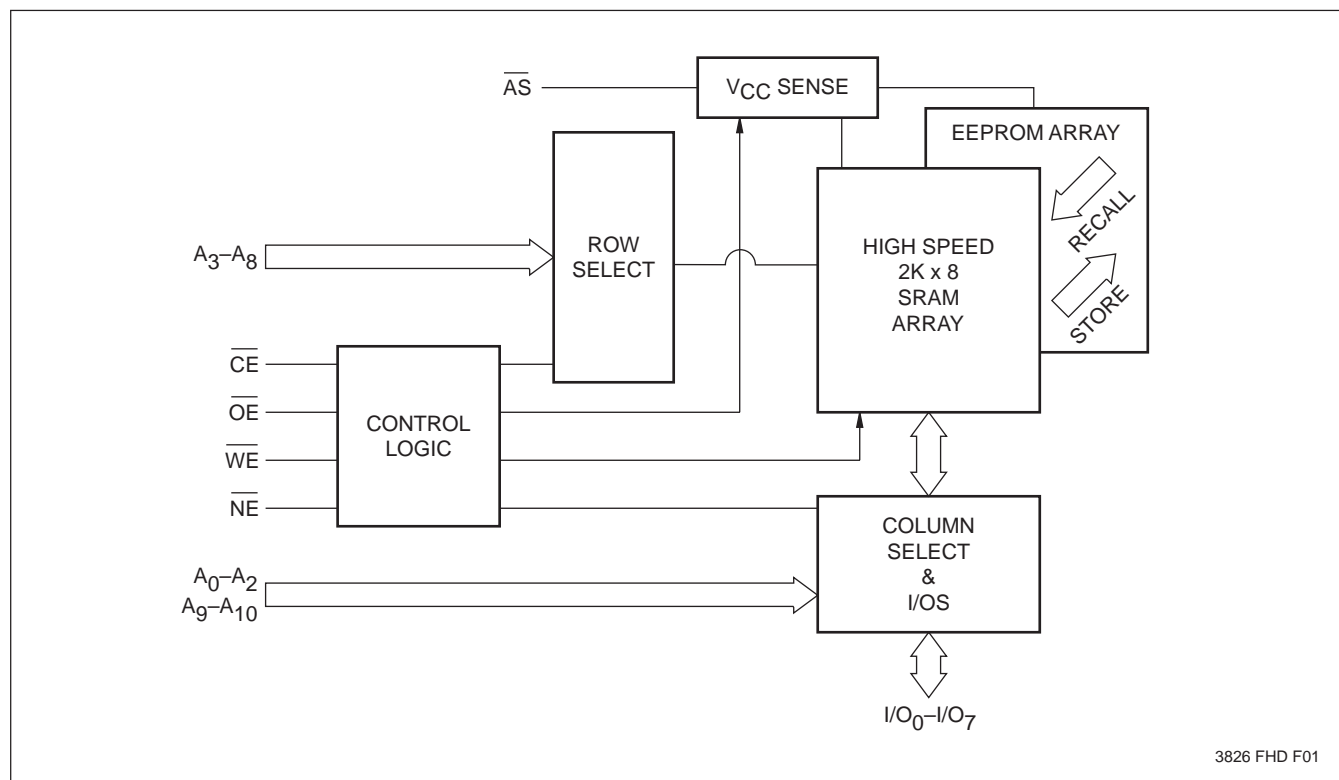

$\overline{AS}$  is an open drain output which, when asserted indicates  $V_{CC}$  has fallen below the AUTOSTORE threshold ( $V_{ASTH}$ ).  $\overline{AS}$  may be wire-ORed with multiple open drain outputs and used as an interrupt input to a microcontroller.

## PIN NAMES

| Symbol            | Description        |
|-------------------|--------------------|
| $A_0$ – $A_{10}$  | Address Inputs     |
| $I/O_0$ – $I/O_7$ | Data Input/Output  |
| $\overline{WE}$   | Write Enable       |
| $\overline{CE}$   | Chip Enable        |
| $\overline{OE}$   | Output Enable      |
| $\overline{NE}$   | Nonvolatile Enable |
| $\overline{AS}$   | AUTOSTORE Output   |
| $V_{CC}$          | +5V                |
| $V_{SS}$          | Ground             |
| NC                | No Connect         |

## FUNCTIONAL DIAGRAM

3826 FHD F01

# X20C16

## DEVICE OPERATION

The  $\overline{CE}$ ,  $\overline{OE}$ ,  $\overline{WE}$ , and  $\overline{NE}$  inputs control the X20C16 operation. The X20C16 byte-wide NOVRAM uses a 2-line control architecture to eliminate bus contention in a system environment. The I/O bus will be in a high impedance state when either  $\overline{OE}$  or  $\overline{CE}$  is HIGH, or when  $\overline{NE}$  is LOW.

### RAM Operations

RAM read and write operations are performed as they would be with any static RAM. A read operation requires  $\overline{CE}$  and  $\overline{OE}$  to be LOW with  $\overline{WE}$  and  $\overline{NE}$  HIGH. A write operation requires  $\overline{CE}$  and  $\overline{WE}$  to be LOW with  $\overline{NE}$  HIGH. There is no limit to the number of read or write operations performed to the RAM portion of the X20C16.

### Memory Transfer Operations

There are two memory transfer operations: a recall operation whereby the data stored in the E<sup>2</sup>PROM array is transferred to the RAM array; and a store operation which causes the entire contents of the RAM array to be stored in the E<sup>2</sup>PROM array.

Recall operations are performed automatically upon power-up and under host system control when  $\overline{NE}$ ,  $\overline{OE}$  and  $\overline{CE}$  are LOW and  $\overline{WE}$  is HIGH. The recall operation takes a maximum of 5 $\mu$ s.

### SDP (Software Data Protection)

There are two methods of initiating a store operation. The first is the software store command. This command takes the place of the hardware store employed on the X20C04. This command is issued by entering into the special command mode:  $\overline{NE}$ ,  $\overline{CE}$ , and  $\overline{WE}$  strobe LOW while at the same time a specific address and data combination is sent to the device. This is a three step operation: the first address/data combination is 555[H]/AA[H]; the second combination is 2AA[H]/55[H]; and the final command combination is 555[H]/33[H]. This sequence of pseudo write operations will immediately initiate a store operation. Refer to the software command timing diagrams for details on set and hold times for the various signals.

The second method of storing data is with the AUTOSTORE command. When enabled, data is auto-

matically stored from the RAM into the E<sup>2</sup>PROM array whenever  $V_{CC}$  falls below the preset Autostore threshold. This feature is enabled by performing the first two steps for the software store with the command combination being 555[H]/CC[H].

The AUTOSTORE feature is disabled by issuing the three step command sequence with the command combination being 555[H]/CD[H]. The AUTOSTORE feature will also be reset if  $V_{CC}$  falls below the power-up reset threshold (approximately 3.5V) and is then raised back into the operation range.

### Write Protection

The X20C16 supports two methods of protecting the nonvolatile data.

—If after power-up the AUTOSTORE feature is not enabled, no AUTOSTORE can occur.

— $V_{CC}$  Sense – All functions are inhibited when  $V_{CC}$  is  $\leq 3.0V$  typical.

## SYMBOL TABLE

The following symbol table provides a key to understanding the conventions used in the device timing diagrams. The diagrams should be used in conjunction with the device timing specifications to determine actual device operation and performance, as well as device suitability for user's application.

| WAVEFORM   | INPUTS                      | OUTPUTS                       |
|--|-----------------------------|-------------------------------|
|  | Must be steady              | Will be steady                |
|  | May change from LOW to HIGH | Will change from LOW to HIGH  |
|  | May change from HIGH to LOW | Will change from HIGH to LOW  |
|  | Don't Care: Changes Allowed | Changing: State Not Known     |
|  | N/A                         | Center Line is High Impedance |

## \*COMMENT

Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and the functional operation of the device at these or any conditions other than those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

| Supply Voltage | Limits  |
|----------------|---------|
| X20C16         | 5V ±10% |

## X20C16

### AUTOSTORE Feature

The AUTOSTORE feature automatically saves the contents of the X20C16's static RAM to the on-board bit-for-bit shadow E<sup>2</sup>PROM at power-down. This circuitry insures that no data is lost during accidental power-downs or general system crashes, and is ideal for microprocessor caching systems, embedded software systems, and general system back-up memory.

The AUTOSTORE instruction (EAS) to the SDP register sets the AUTOSTORE enable latch, allowing the X20C16 to automatically perform a store operation whenever  $V_{CC}$  falls below the AUTOSTORE threshold ( $V_{ASTH}$ ).  $V_{CC}$  must remain above the AUTOSTORE Cycle End Voltage ( $V_{ASEND}$ ) for the duration of the store cycle ( $t_{ASTO}$ ). The detailed timing for this feature is illustrated in the AUTOSTORE timing diagram, below. Once the AUTOSTORE cycle is initiated, all other device functions are inhibited.

### AUTOSTORE CYCLE Timing Diagrams

## PACKAGING INFORMATION

### 28-LEAD HERMETIC DUAL IN-LINE PACKAGE TYPE D

NOTE: ALL DIMENSIONS IN INCHES (IN PARENTHESES IN MILLIMETERS)

3926 FHD F08

X20C16

PACKAGING INFORMATION

28-LEAD PLASTIC DUAL IN-LINE PACKAGE TYPE P

NOTE: ALL DIMENSIONS IN INCHES (IN PARENTHESES IN MILLIMETERS)

3926 FHD F04

# X20C16

## PACKAGING INFORMATION

### 32-PAD CERAMIC LEADLESS CHIP CARRIER PACKAGE TYPE E

#### NOTE:

1. ALL DIMENSIONS IN INCHES (IN PARENTHESES IN MILLIMETERS)
2. TOLERANCE:  $\pm 1\%$  NTL  $\pm 0.005$  (0.127)

## PACKAGING INFORMATION

### 32-LEAD PLASTIC LEADED CHIP CARRIER PACKAGE TYPE J

#### NOTES:

1. ALL DIMENSIONS IN INCHES (IN PARENTHESES IN MILLIMETERS)
2. DIMENSIONS WITH NO TOLERANCE FOR REFERENCE ONLY

# X20C16

## PACKAGING INFORMATION

### 28-LEAD PLASTIC SMALL OUTLINE GULL WING PACKAGE TYPE S

#### NOTES:

1. ALL DIMENSIONS IN INCHES (IN PARENTHESES IN MILLIMETERS)
2. FORMED LEAD SHALL BE PLANAR WITH RESPECT TO ONE ANOTHER WITHIN 0.004 INCHES
3. BACK EJECTOR PIN MARKED "KOREA"
4. CONTROLLING DIMENSION: INCHES (MM)

3926 FHD F17

# X20C16

## PACKAGING INFORMATION

### 32-LEAD THIN SMALL OUTLINE PACKAGE (TSOP) TYPE T

#### NOTE:

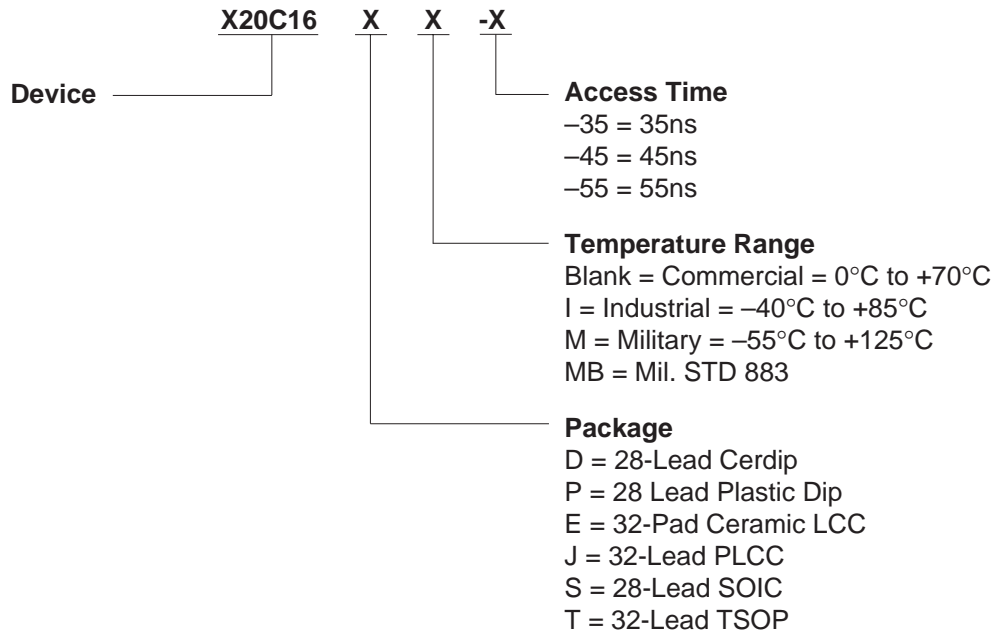

1. ALL DIMENSIONS ARE SHOWN IN MILLIMETERS (INCHES IN PARENTHESES).

### LIMITED WARRANTY

Devices sold by Xicor, Inc. are covered by the warranty and patent indemnification provisions appearing in its Terms of Sale only. Xicor, Inc. makes no warranty, express, statutory, implied, or by description regarding the information set forth herein or regarding the freedom of the described devices from patent infringement. Xicor, Inc. makes no warranty of merchantability or fitness for any purpose. Xicor, Inc. reserves the right to discontinue production and change specifications and prices at any time and without notice.

Xicor, Inc. assumes no responsibility for the use of any circuitry other than circuitry embodied in a Xicor, Inc. product. No other circuits, patents, licenses are implied.

### US. PATENTS

Xicor products are covered by one or more of the following U.S. Patents: 4,263,664; 4,274,012; 4,300,212; 4,314,265; 4,326,134; 4,393,481; 4,404,475; 4,450,402; 4,486,769; 4,488,060; 4,520,461; 4,533,846; 4,599,706; 4,617,652; 4,668,932; 4,752,912; 4,829,482; 4,874,967; 4,883,976. Foreign patents and additional patents pending.

### LIFE RELATED POLICY

In situations where semiconductor component failure may endanger life, system designers using this product should design the system with appropriate error detection and correction, redundancy and back-up features to prevent such an occurrence.

Xicor's products are not authorized for use as critical components in life support devices or systems.

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
