

CD4071BM/CD4071BC **Quad 2-Input OR Buffered B Series Gate** **CD4081BM/CD4081BC** **Quad 2-Input AND Buffered B Series Gate**

General Description

These quad gates are monolithic complementary MOS (CMOS) integrated circuits constructed with N- and P-channel enhancement mode transistors. They have equal source and sink current capabilities and conform to standard B series output drive. The devices also have buffered outputs which improve transfer characteristics by providing very high gain.

All inputs protected against static discharge with diodes to V_{DD} and V_{SS} .

Features

- Low power TTL compatibility
- 5V–10V–15V parametric ratings
- Symmetrical output characteristics
- Maximum input leakage 1 μA at 15V over full temperature range

Fan out of 2 driving 74L
or 1 driving 74LS

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: All voltages measured with respect to V_{SS} unless otherwise specified.

Note 3: I_{OH} and I_{OL} are tested one output at a time.
