1. Theory of Operation	
Processor Board Description	1-1
Clock Generator (U107, U110)	1-1
Reset Circuit (U109) with Buffers (U104)	1-1
Central Processor Unit (U101) with PAL (U106), Address Decoder (U105) and Interface Control (U103, U104)	1-1
Memories and Battery Supplies	1-2
EPROMs,	1-2
RAM	1-2
Battery Buffered RAM	1-2
Device-Bus Interface	1-2
HP-IB, Real Time Clock and Interface/Clock Selection	1-3
HP-IB	1-3
Real Time Clock	1-3
Interface/Clock Selection	1-3
Display/Keyboard/Interrupt Interface	1-3
Interrupts	1-3
Keyboard Control	1-4
Display Data and Brightness	1-4
Display Voltage Supply	1-4
Power Supply Board	1-4
Primary regulation	1-4
Secondary regulation	1-5
Overvoltage Protection and Low Voltage Detection	1-5
Display Board	1-5
2. Functional Tests	
Specifications	2-1
Mainframe Specifications	2-1
Function Tests	2-2
Introduction	2-2
Equipment Required	2-2
Test Record	2-3
Test Failure	2-3
Instruments Specifications	2-3
IA. Function Test Using the HP 81533A	2-3
Display Function and Module Interface Tests	2-4
Display Function Tests	2-4
Module Interface Tests	2-4
ANALOG INPUT (8152A IN)	2-6

P.CTRL	2-6
IB. Function Test using a HP 81530/31/32 or HP 81536A Sensor Module.	2-7
HP-IB Interface Test (Optional)	2-7
3. Assembling and Disassembling the Instrument	
Removing the Instrument Housing	3-1
Removing the Front Panel Assembly	3-1
Removing the Power Supply Board	3-2
Removing the Processor Board	3-2
Removing the Mother Board	3-3
Removing the Fan Assembly	3-3
4. Troubleshooting	
General	4-1
Troubleshooting the A3 Power Supply Board	4-2
Preparing to Check Power Supply Voltages	4-2
Checking Power Supply Voltages	4-2
Adjusting the Power Supply	4-3
Troubleshooting the A1 Processor Board	4-4
Before You Start	4-4
Running in Free Run Mode	4-4
Troubleshooting in Free Run Mode	4-5
Troubleshooting the Battery Buffered RAM Supply	4-6
Troubleshooting the VFD Voltage Supply	4-7
