Performance Verification Procedures

| | |
|--|-------------|
| Performance Verification Procedures | 1-1 |
| Input Channels vs. Model | 1-2 |
| Conventions | 1-2 |
| Brief Procedures | 1-5 |
| Self Tests | 1-5 |
| Functional Tests | 1-7 |
| Performance Tests | 1-15 |
| Prerequisites | 1-15 |
| Equipment Required | 1-16 |
| TDS 600B Test Record | 1-18 |
| TDS 500D/700D Test Record | 1-22 |
| TDS 794D Test Record | 1-26 |
| Signal Acquisition System Checks | 1-29 |
| Time Base System Checks | 1-46 |
| Trigger System Checks | 1-49 |
| Output Signal Checks | 1-62 |
| Option 05 Video Trigger Checks (Not Available on TDS 794D) | 1-71 |
| Sine Wave Generator Leveling Procedure | 1-88 |
| Optical Filters Checks (TDS 500D/TDS 700D Only) | 1-91 |

Specifications

| | |
|--|-------------|
| Specifications | 2-1 |
| Product Description | 2-1 |
| User Interface | 2-2 |
| Signal Acquisition System | 2-3 |
| Horizontal System | 2-3 |
| Trigger System | 2-5 |
| Acquisition Control | 2-6 |
| On-Board User Assistance | 2-7 |
| Measurement Assistance | 2-7 |
| Storage | 2-8 |
| I/O | 2-8 |
| Display | 2-9 |
| Nominal Traits | 2-11 |
| Warranted Characteristics | 2-19 |
| Typical Characteristics | 2-27 |

List of Figures

| | |
|--|------|
| Figure 1–1: Map of display functions | 1–3 |
| Figure 1–2: Verifying adjustments and signal-path compensation .. | 1–6 |
| Figure 1–3: Universal test hookup for functional tests – TDS 600B shown | 1–8 |
| Figure 1–4: Measurement of DC offset accuracy at zero setting .. | 1–31 |
| Figure 1–5: Initial test hookup | 1–32 |
| Figure 1–6: Measurement of DC accuracy at maximum offset and position | 1–35 |
| Figure 1–7: Initial test hookup | 1–37 |
| Figure 1–8: Optional initial test hookup | 1–37 |
| Figure 1–9: Measurement of analog bandwidth | 1–40 |
| Figure 1–10: Initial test hookup | 1–42 |
| Figure 1–11: Measurement of channel delay – TDS 684B shown .. | 1–44 |
| Figure 1–12: Initial test hookup | 1–46 |
| Figure 1–13: Measurement of accuracy – Long-term and delay time | 1–48 |
| Figure 1–14: Initial test hookup | 1–50 |
| Figure 1–15: Measurement of time accuracy for pulse and glitch triggering | 1–51 |
| Figure 1–16: Initial test hookup | 1–53 |
| Figure 1–17: Measurement of trigger-level accuracy | 1–55 |
| Figure 1–18: Initial test hookup | 1–58 |
| Figure 1–19: Measurement of trigger sensitivity – 50 MHz results shown on a TDS 684B screen | 1–59 |
| Figure 1–20: Initial test hookup | 1–62 |
| Figure 1–21: Measurement of main trigger out limits | 1–64 |
| Figure 1–22: Initial test hookup | 1–66 |
| Figure 1–23: Measurement of probe compensator frequency | 1–68 |
| Figure 1–24: Subsequent test hookup | 1–69 |
| Figure 1–25: Measurement of probe compensator amplitude | 1–70 |
| Figure 1–26: Jitter test hookup | 1–72 |
| Figure 1–27: Jitter test displayed waveform – TDS 684B shown .. | 1–73 |
| Figure 1–28: Jitter test when completed – TDS 684B shown | 1–74 |
| Figure 1–29: Triggered signal range test – 300 mV | 1–75 |
| Figure 1–30: Triggered signal range test – 75 mV | 1–76 |
| Figure 1–31: 60 Hz Rejection test hookup | 1–77 |
| Figure 1–32: 60 Hz Rejection test setup signal | 1–77 |

| | |
|--|------|
| Figure 1-33: Subsequent 60 Hz Rejection test hookup | 1-78 |
| Figure 1-34: 60 Hz Rejection test result – TDS 684B shown | 1-79 |
| Figure 1-35: Line count accuracy test hookup | 1-80 |
| Figure 1-36: Line count accuracy test setup waveform – TDS 684B shown | 1-81 |
| Figure 1-37: Line count accuracy correct result waveform | 1-82 |
| Figure 1-38: Setup for sync duty cycle test | 1-84 |
| Figure 1-39: Sync duty cycle test: one-div neg pulse waveform | 1-85 |
| Figure 1-40: Sync duty cycle test: critically adjusted pulse | 1-86 |
| Figure 1-41: Sine wave generator leveling equipment setup | 1-88 |
| Figure 1-42: Equipment setup for maximum amplitude | 1-90 |
| Figure 1-43: Reference-receiver performance-verification set up ... | 1-93 |
| Figure 1-44: Optical impulse of Ch1 input from OA5022 Optical Attenuator (OIG501 / OIG502 fed into optical attenuator in Step 1) | 1-95 |
| Figure 1-45: Optical impulse response for OC-12 SONET Reference Receiver | 1-98 |
| Figure 1-46: Optical impulse response for OC-12 SONET Reference Receiver | 1-99 |

List of Tables

| | |
|--|-------|
| Table 1-1: Test equipment | 1-16 |
| Table 1-2: DC offset accuracy (zero setting) | 1-30 |
| Table 1-3: DC Voltage measurement accuracy | 1-34 |
| Table 1-4: Analog bandwidth | 1-39 |
| Table 1-5: Delay between channels worksheet | 1-45 |
| Table 1-6: Trigger level accuracy readout | 1-54 |
| Table 1-7: Delayed trigger level accuracy readout | 1-56 |
| Table 1-8: Available Filters | 1-91 |
| Table 1-9: Reference Receiver Filter Options: | 1-91 |
| Table 1-10: Option 3C and 4C Specifications | 1-92 |
| Table 1-11: Available receivers | 1-92 |
| Table 1-12: Bessel Thompson frequency response and reference receiver limits | 1-100 |
| | |
| Table 2-1: Key features of the TDS 500D, 600B and 700D oscilloscopes | 2-1 |
| Table 2-2: Record length and divisions per record vs. TDS model .. | 2-4 |
| Table 2-3: Nominal traits — Signal acquisition system | 2-11 |
| Table 2-4: Nominal traits — Time base system | 2-12 |
| Table 2-5: Nominal traits — Triggering system | 2-13 |
| Table 2-6: Nominal traits — Display system | 2-15 |
| Table 2-7: Nominal traits — GPIB interface, output ports, and power fuse | 2-16 |
| Table 2-8: Nominal traits — Data handling and reliability | 2-16 |
| Table 2-9: Nominal traits — Mechanical | 2-17 |
| Table 2-10: Warranted characteristics — Signal acquisition system | 2-20 |
| Table 2-11: Warranted characteristics — Time base system | 2-21 |
| Table 2-12: Warranted characteristics — Triggering system | 2-22 |
| Table 2-13: Warranted characteristics — Output ports, probe compensator, and power requirements | 2-23 |
| Table 2-14: Warranted characteristics — Environmental | 2-24 |
| Table 2-15: Certifications and compliances | 2-26 |
| Table 2-16: Typical characteristics — Signal acquisition system ... | 2-27 |
| Table 2-17: Typical characteristics — Triggering system | 2-30 |
